Columbia University GSAPP, M.S. AAD 25

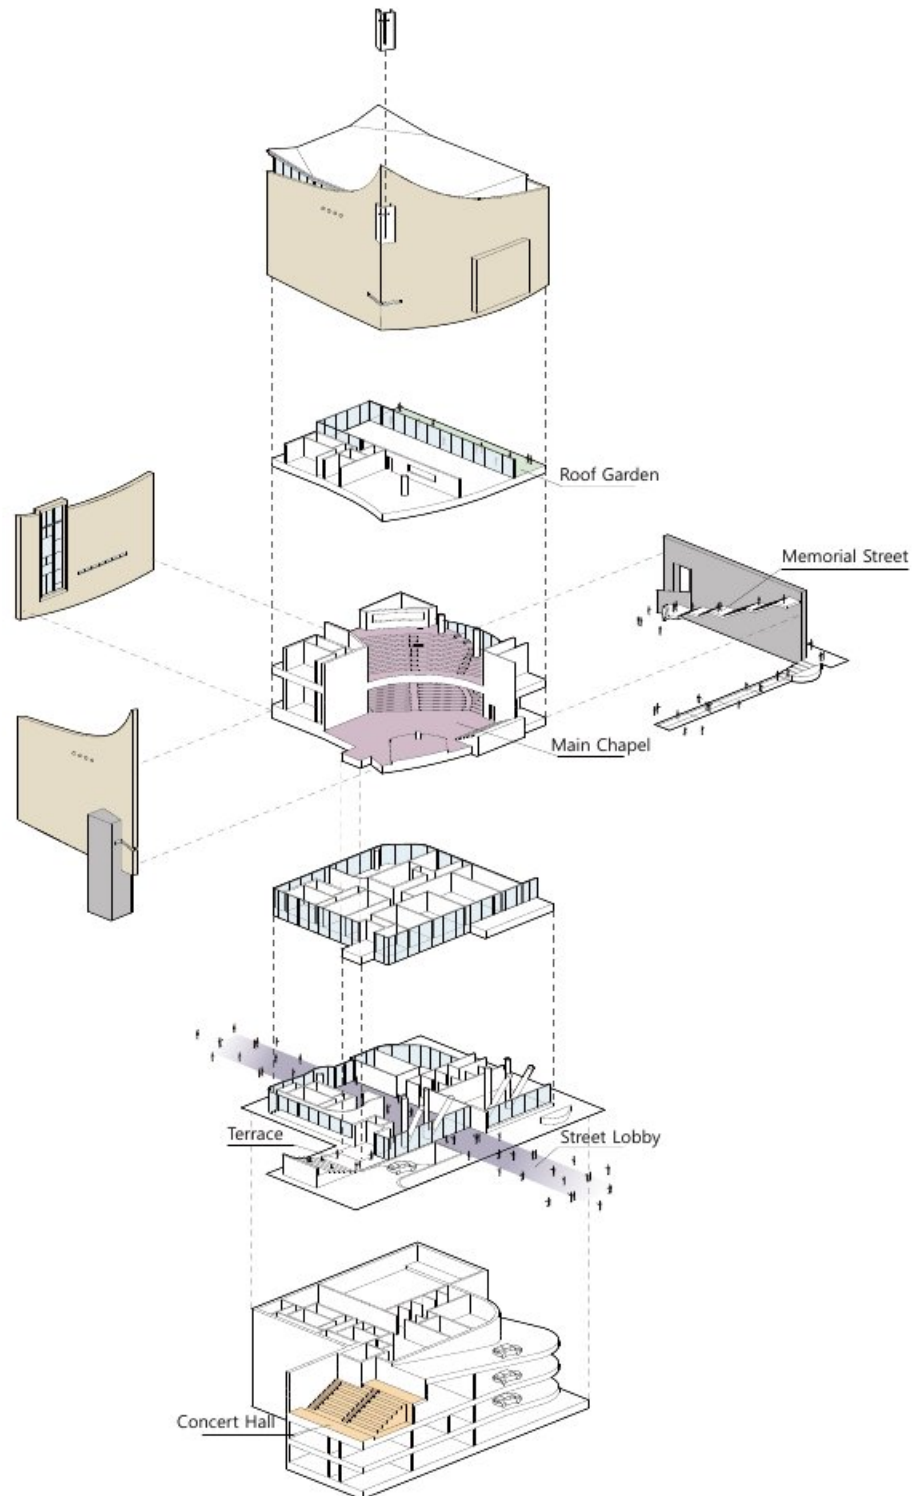

Over eight years of architectural experience in South Korea

Licensed architect in South Korea

Quick to adapt, proactive by nature, and driven by a commitment to excellence

CHURCH FOR THE CITY

Year 2017 - 2022
Firm Atelier KOMA
Role Designer, Construction Administration
Location Seoul, Korea
Type Religious Institution
Tool Rhino, SketchUp, AutoCAD, Photoshop, Illustrator
Photographer Yoon Junhwan

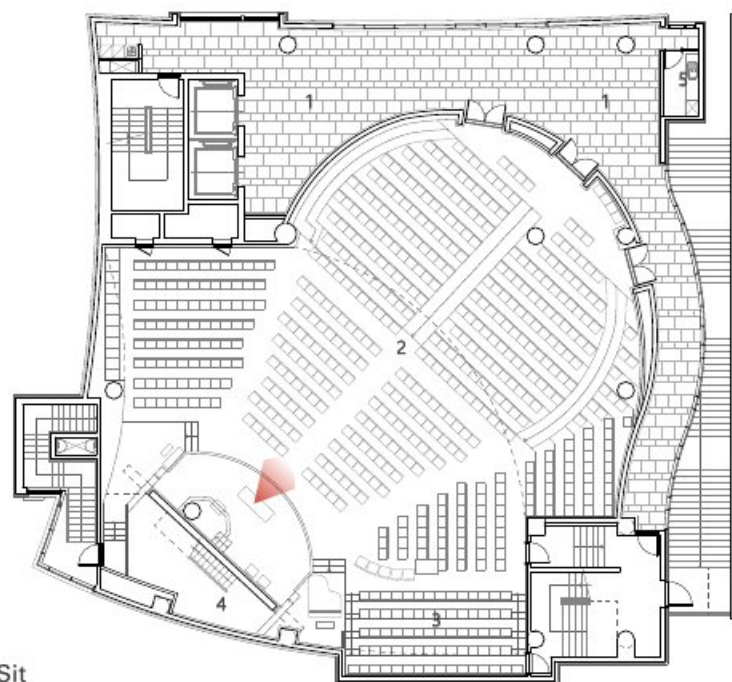

Lifted Architecture, Open Value

01_Concept and Philosophy
The project embraces the concept of "Lifted Architecture, Open Values," emphasizing openness and active engagement with the city through architecture

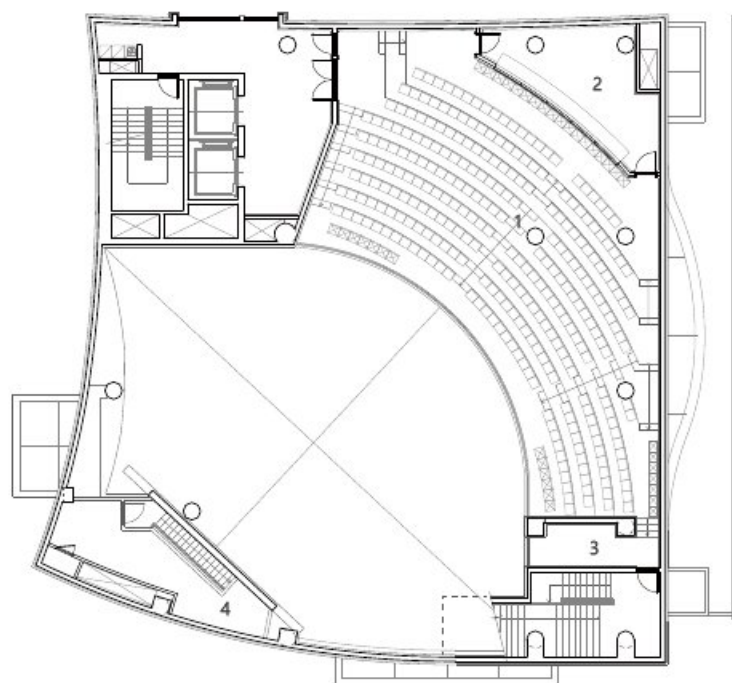

02_Architectural Implementation
An elevated granite volume creates open spaces below, fostering communication and interaction. This design transforms the church into an accessible, community-connected space, with lower-level exchange areas maximizing openness

03_Publicness and Design
Publicness is a core focus, with traditional symbolism minimized to prioritize spaces that serve the local community, redefining modern churches as socially engaged entities

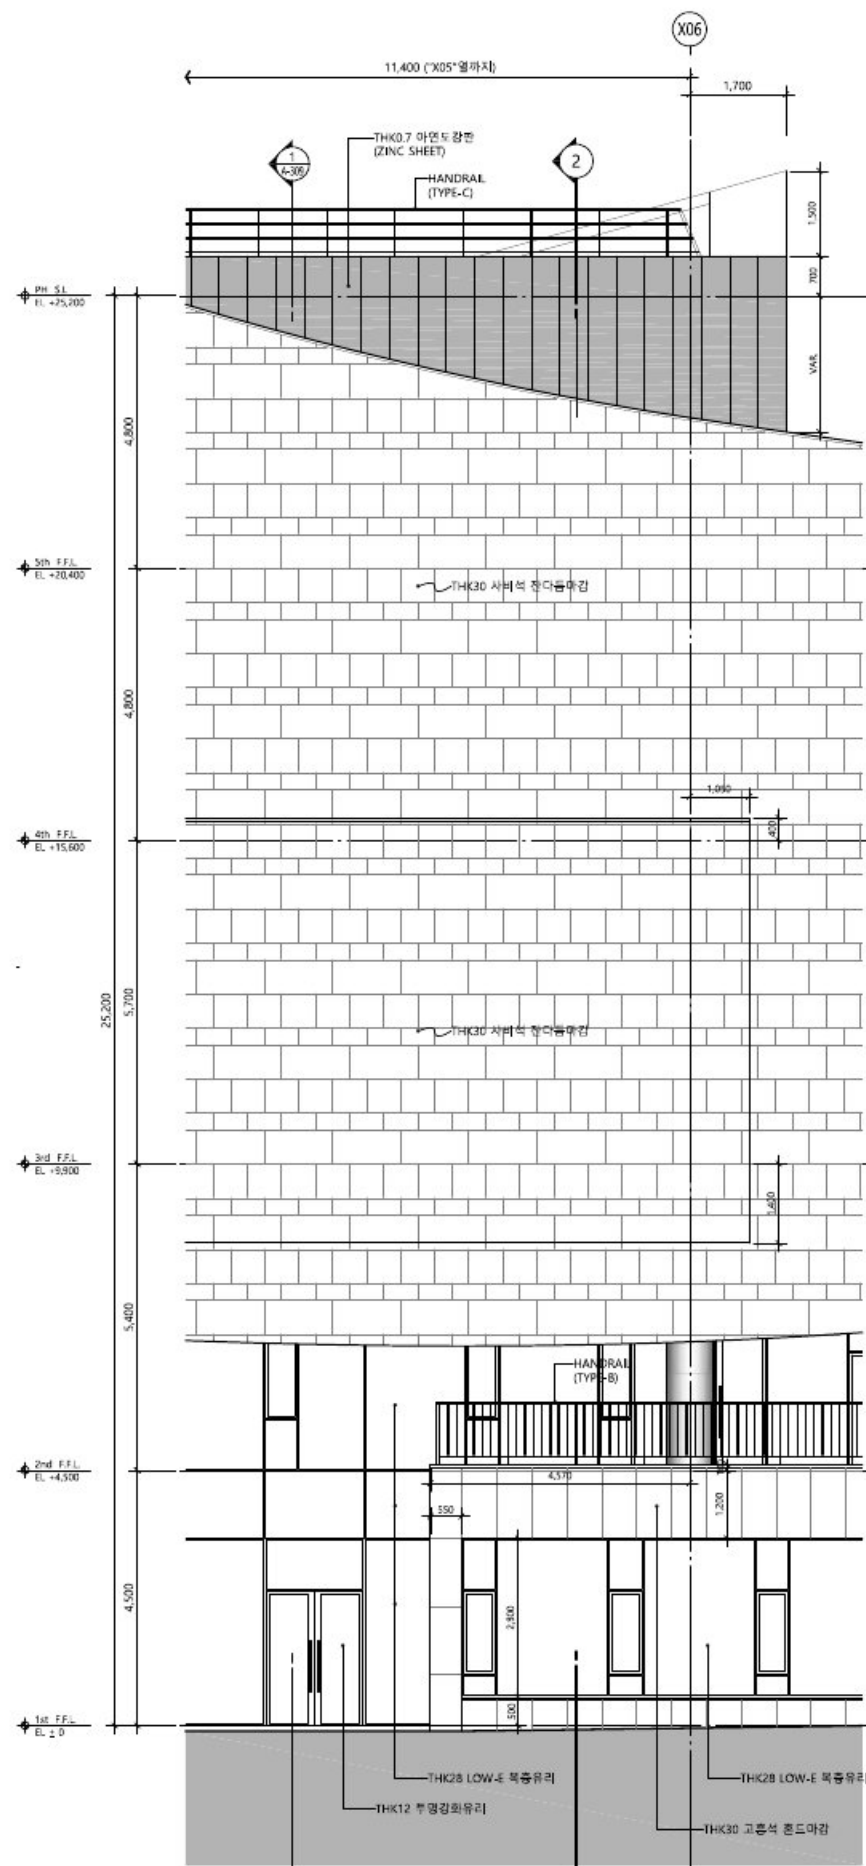

- 1 Chapel Hall
- 2 Main Chapel
- 3 Choral Group Sit
- 4 Prepare Room
- 5 Pantry

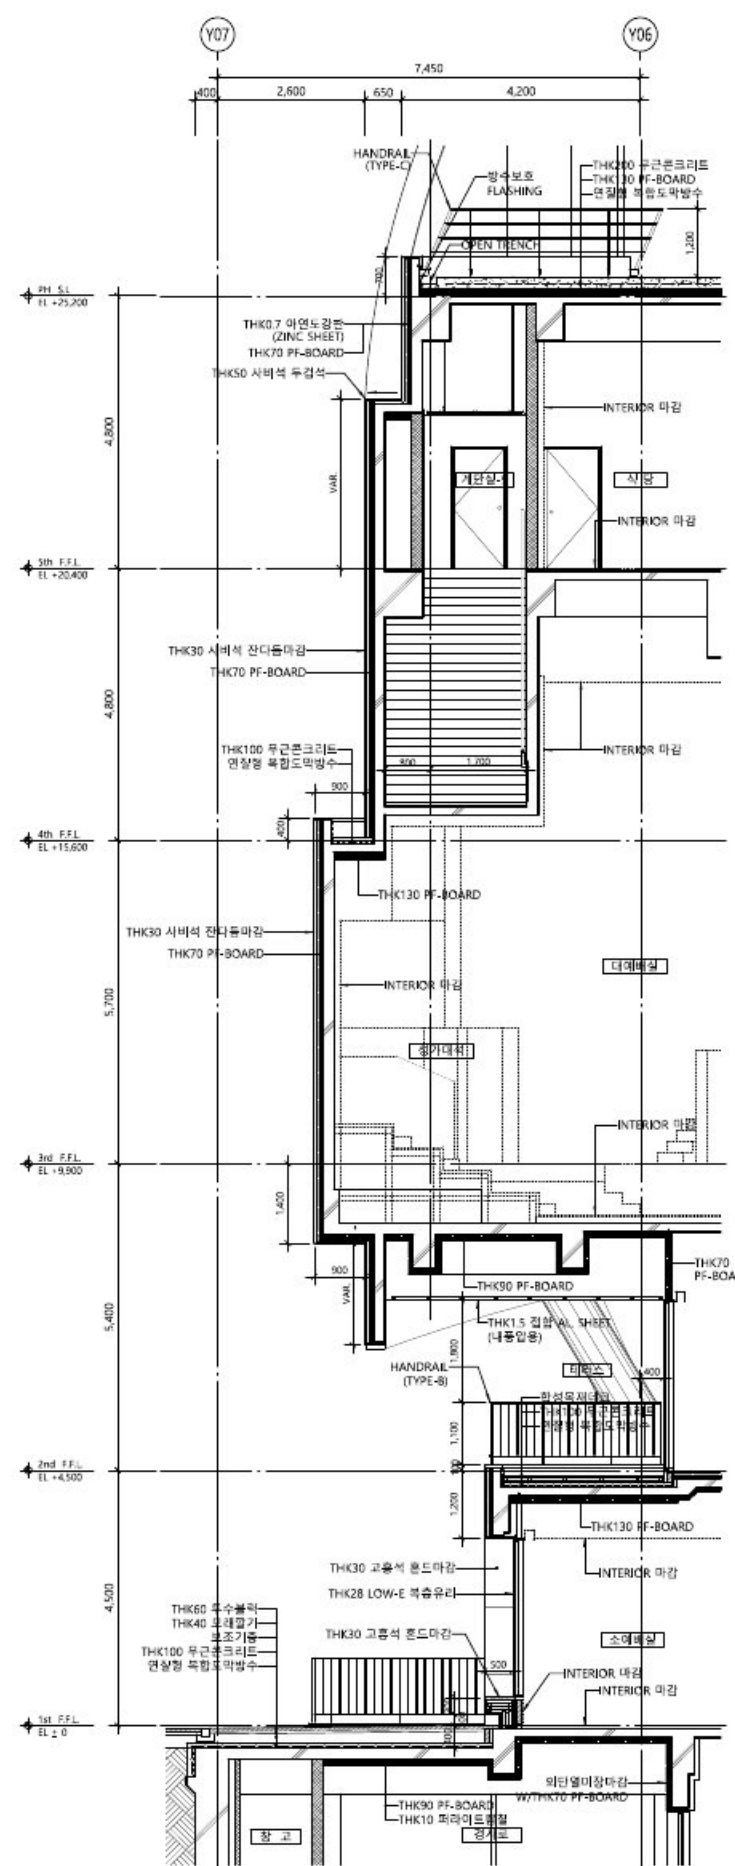

- 1 Balcony
- 2 Studio
- 3 Acoustic corner
- 4 Storage

MUNHAK VILLAGE

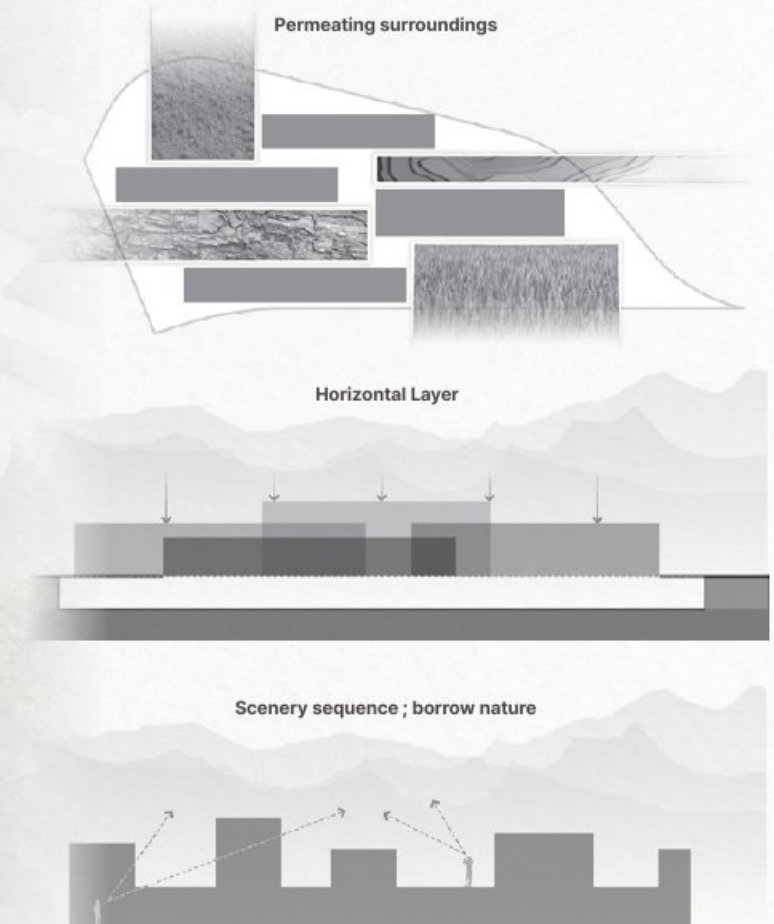

Award **International Competition 1st prize**
Year **2021 - 2023 (Under Construction)**
Firm **Atelier KOMA**
Role **Project Manager, Main Designer of Competition**
Location **Seoul, Korea**
Type **National Museum of Korean Literature**
Tool **Rhino, Vray, SketchUp, AutoCAD, Photoshop, Illustrator, Lumion**

Permeating Nature, Becoming Villagers

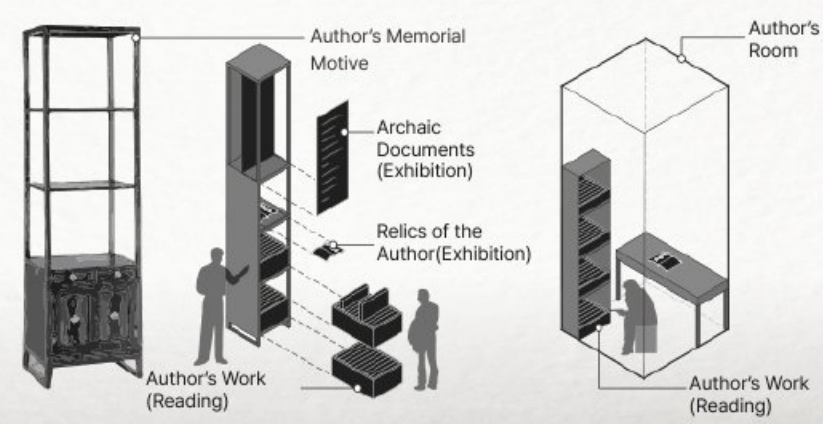

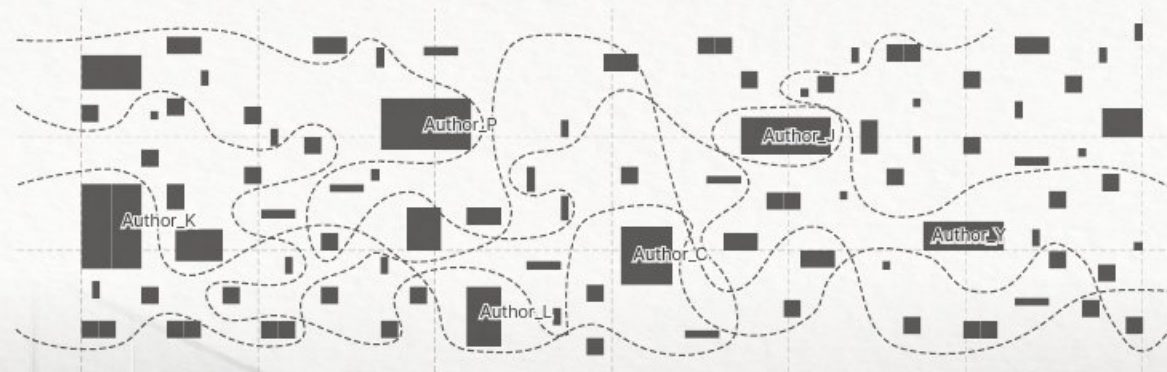

01_ As a **neutral** space between green space and the city, it connects the two. The various relationships that come in through the segmented masses enrich the space. It allows people to experience **wandering** through various as if they were **strolling through the alleys of a village**

02_ The architecture itself symbolizes the values of a **Korean village**. The **low, horizontal and overlapping** forms demonstrate the harmony with nature

03_ It has a **segmented form** so that it can be operated separately in response to the **pandemic**. Additionally, this form creates various **frames for viewing nature**

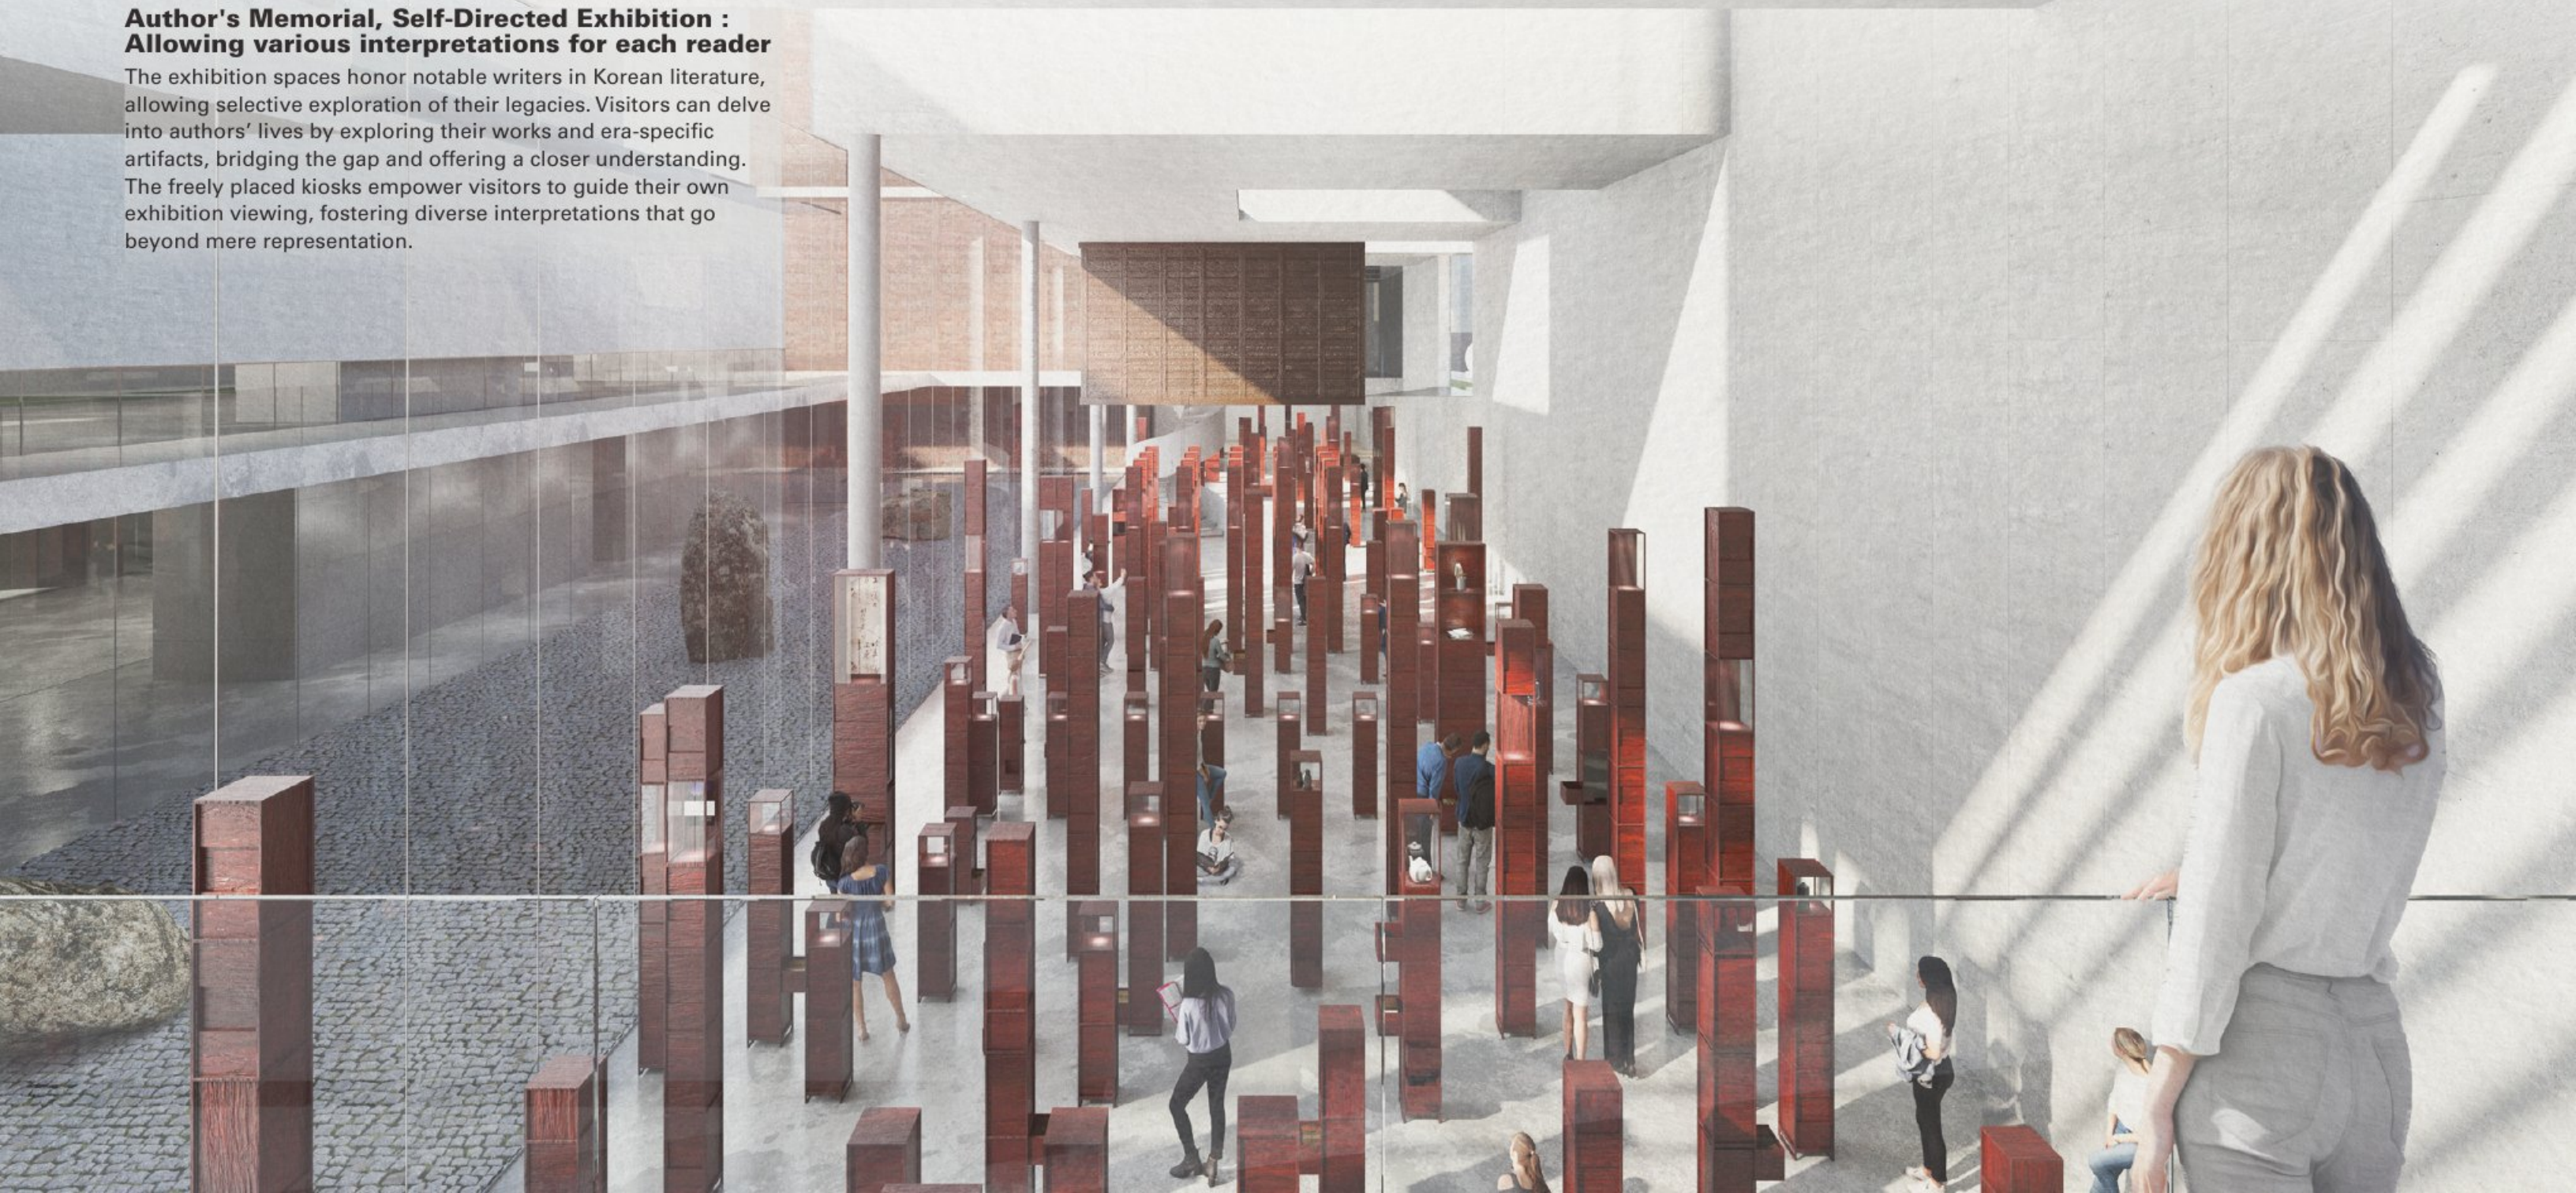

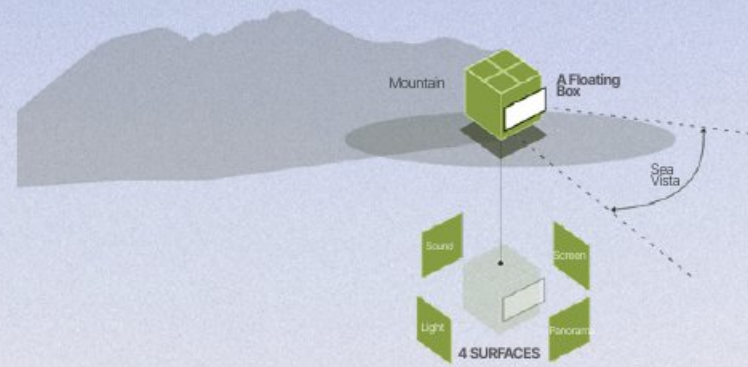

Author's Memorial, Self-Directed Exhibition : Allowing various interpretations for each reader

The exhibition spaces honor notable writers in Korean literature, allowing selective exploration of their legacies. Visitors can delve into authors' lives by exploring their works and era-specific artifacts, bridging the gap and offering a closer understanding. The freely placed kiosks empower visitors to guide their own exhibition viewing, fostering diverse interpretations that go beyond mere representation.

MEDITATION CHAPEL

Award **Best 7 of the year in 2023, KIA**
Year 2020 - 2023
Firm Atelier KOMA
Role Project Manager, Construction Supervision
Location Incheon, Korea
Type Religious Institution
Tool SketchUp, AutoCAD, Photoshop, Illustrator, Lumion, Enscape
Photographer Yongseong Kim, Urban Azit, Jooyeoun Lee

Lifted Concrete, Open to Horizon

01_One Lifted Volume

A lifted box gently placed in nature minimizes impact and opens up vast, unobstructed views, connecting the chapel to its surroundings.

02_Simple Concrete box

A thermally-insulated concrete box creates a minimal, quiet space where light and stillness become the focus.

03_Three Meditative Spaces

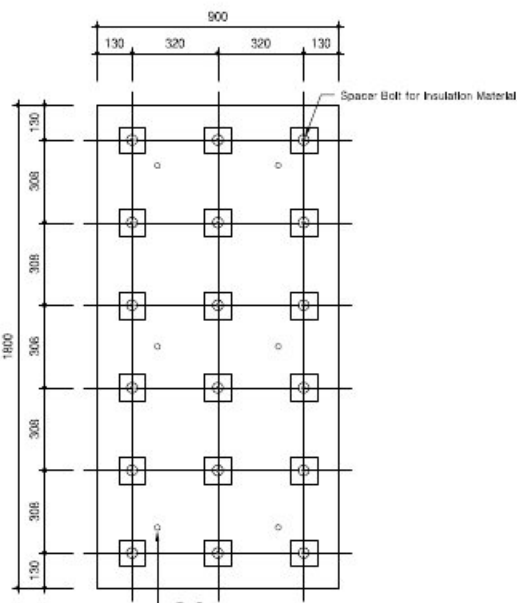

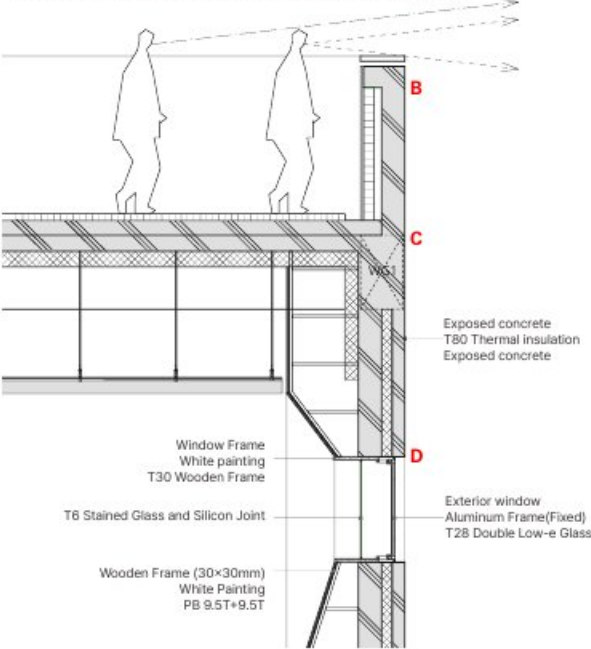

The chapel consists of three spaces: the 'Sea Chapel' facing the horizon, the 'Closet Chapel' centered on light, and the rooftop 'Sky Chapel' open to the sky.

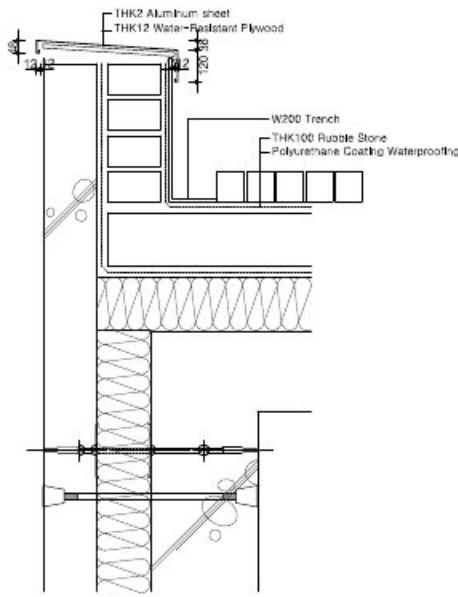

The Meditation Chapel is situated on the mountainside of Ganghwa Island, away from the urban center, offering a distant view of the vast sea from the site.

IMMERSION SEED

Year/School 2025 SPRING / Columbia GSAPP
Role Design, Document, Team of two
Location La Brea, Trinidad and Tobago
Type Sensory Experience Bath
Instructor Mireia Luzarraga (TAKK)
Tool Rhino, Grasshopper, Vray, Photoshop, Illustrator, Lumion

From The Wound of Pitch Lake, A Seed of Regeneration

Pitch Lake is a mysterious natural asphalt lake, formed by nature over hundreds of thousands of years. We propose to plant a seed of healing and restoration in this wounded black lake. Through Immersion Seed—a sensory bath, a sanctuary for birds, and a habitat for microorganisms—we envision a space where Pitch Lake may be regenerated and returned to its community.

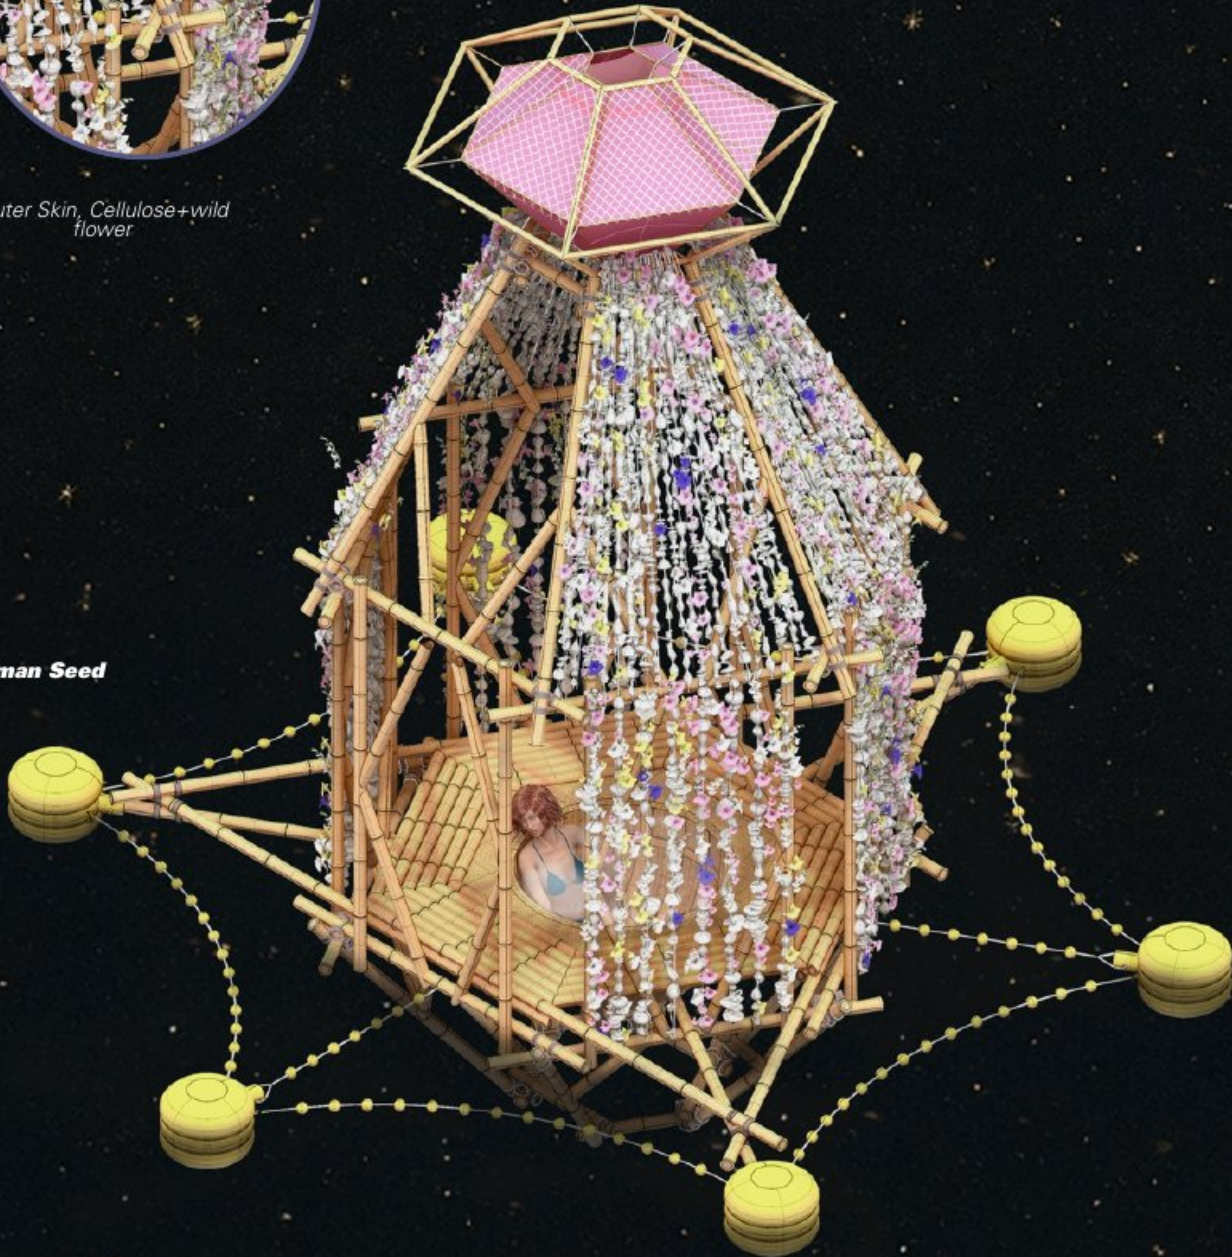

Build to Sink, Built by Hand

The entire structure is built by hand, using traditional, low-tech methods without relying on large-scale machinery. Crucially, Immersion Seed is not imposed by external systems. All materials and construction techniques are designed to be manageable by local communities. The economic benefits from this new form of device remain entirely with them — supporting a shift toward self-determined, decolonial futures.

CONSULATION WAVE

Year/School 2024 Summer / Columbia GSAPP
Role Individual Work
Location Brooklyn, New York
Type Waterfront Park, Installation Art
Instructor Nocturnal Medicine (Michelle Farang Shofet, Larissa Belic)
Tool Rhino, Grasshopper, AutoCAD, Photoshop, Illustrator, Lumion, Enscape

Facing and Healing the Wounds of Sacrifice in Gowanus Canal

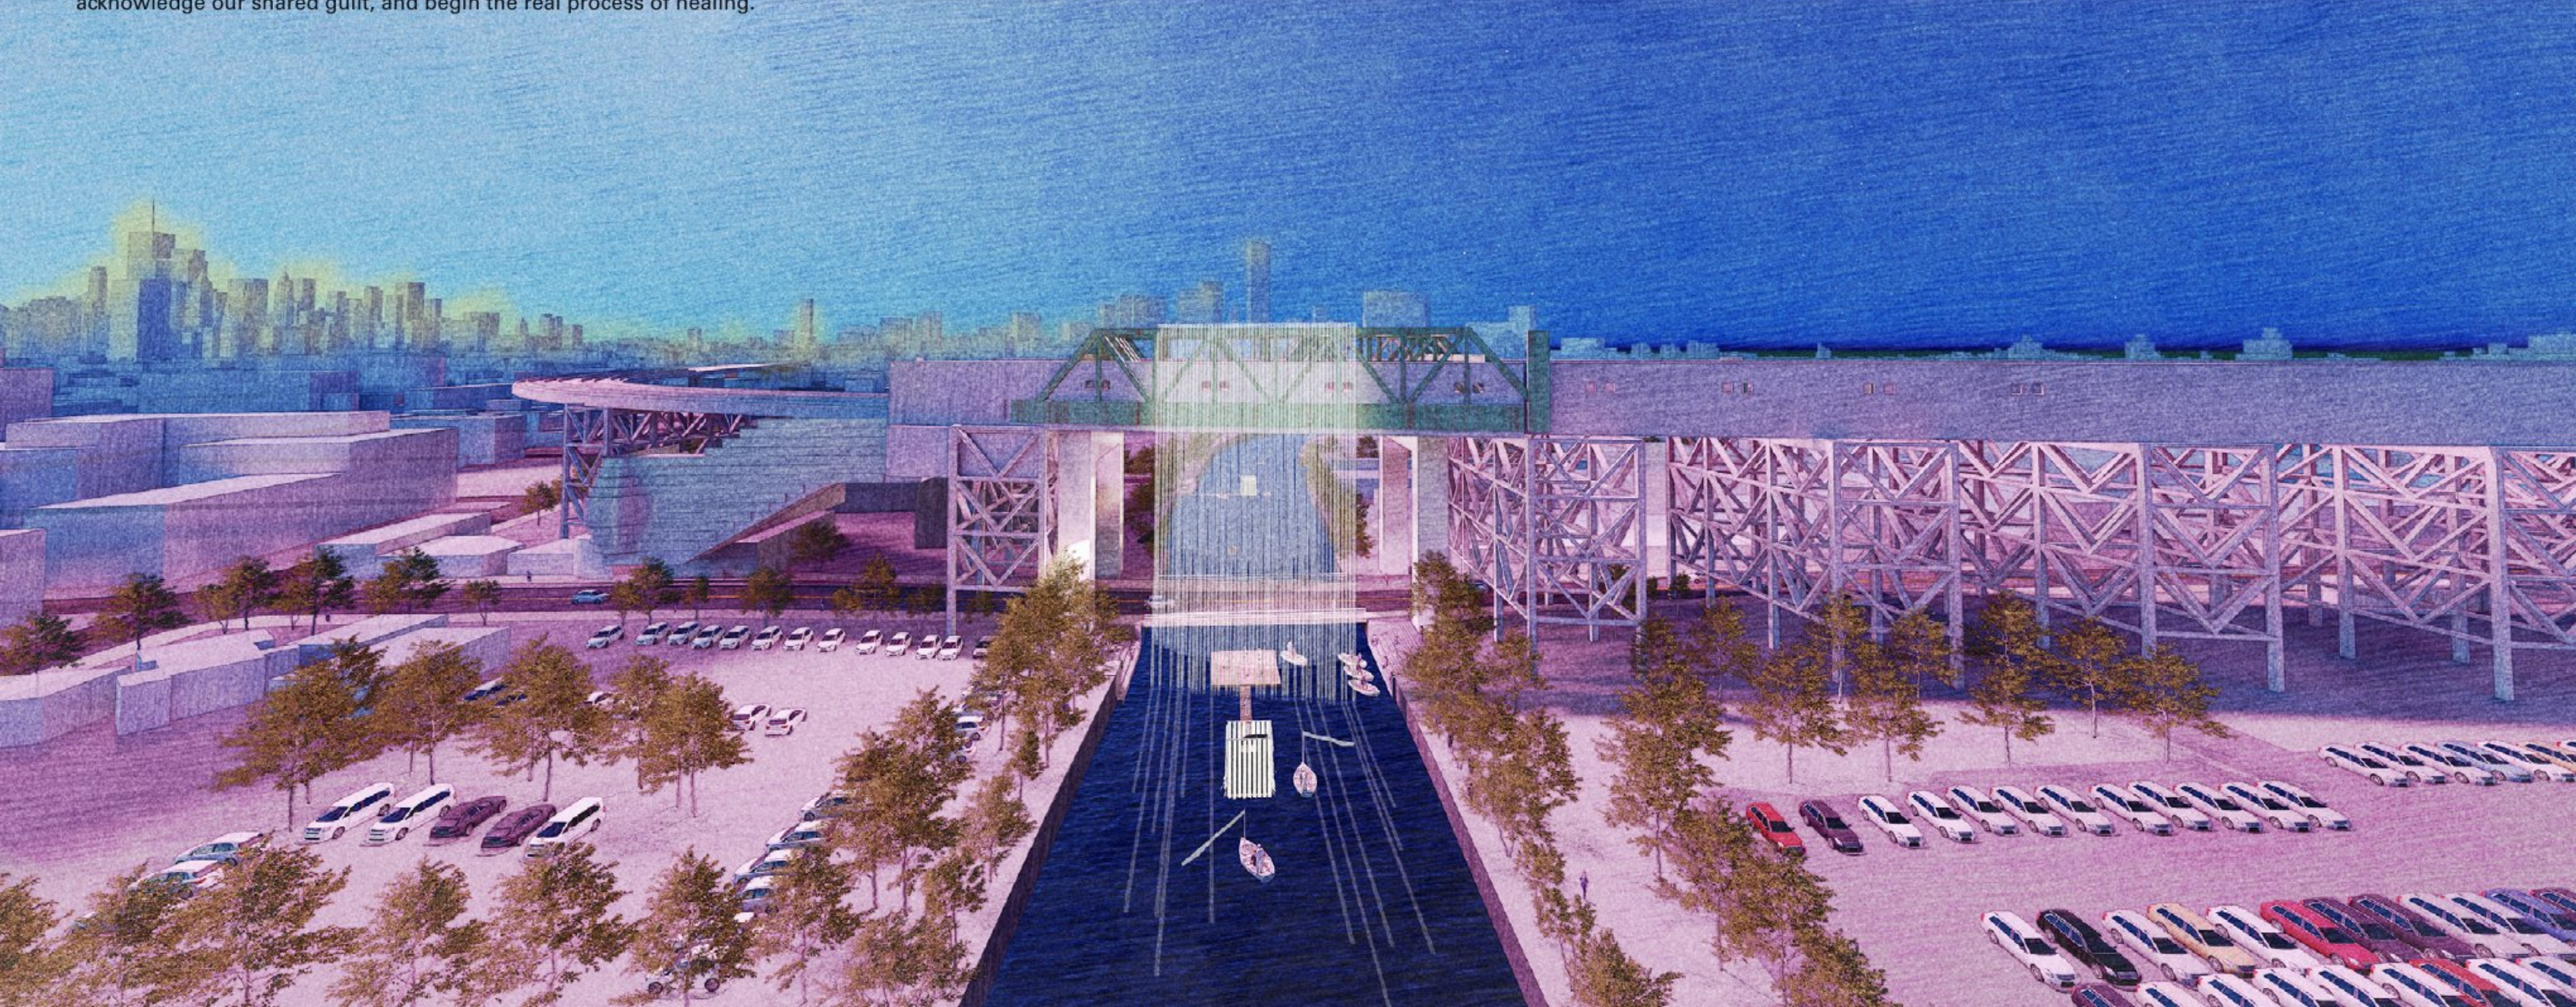

Gowanus has long sacrificed itself to birth the tall, gleaming Manhattan we admire today, through the coal and steel industries. The memories of those sacrifices lie buried deep at the bottom of the Gowanus Canal, forming a toxic layer known as “black mayonnaise.” These wounds of sacrifice continue to create new scars. While we can admire Manhattan’s striking skyline from the train station, we turn away from the grim reality of Gowanus—the garbage, the pollution, and the scars it bears. To truly move forward, we must confront the harsh truths of Gowanus’s condition, acknowledge our shared guilt, and begin the real process of healing.

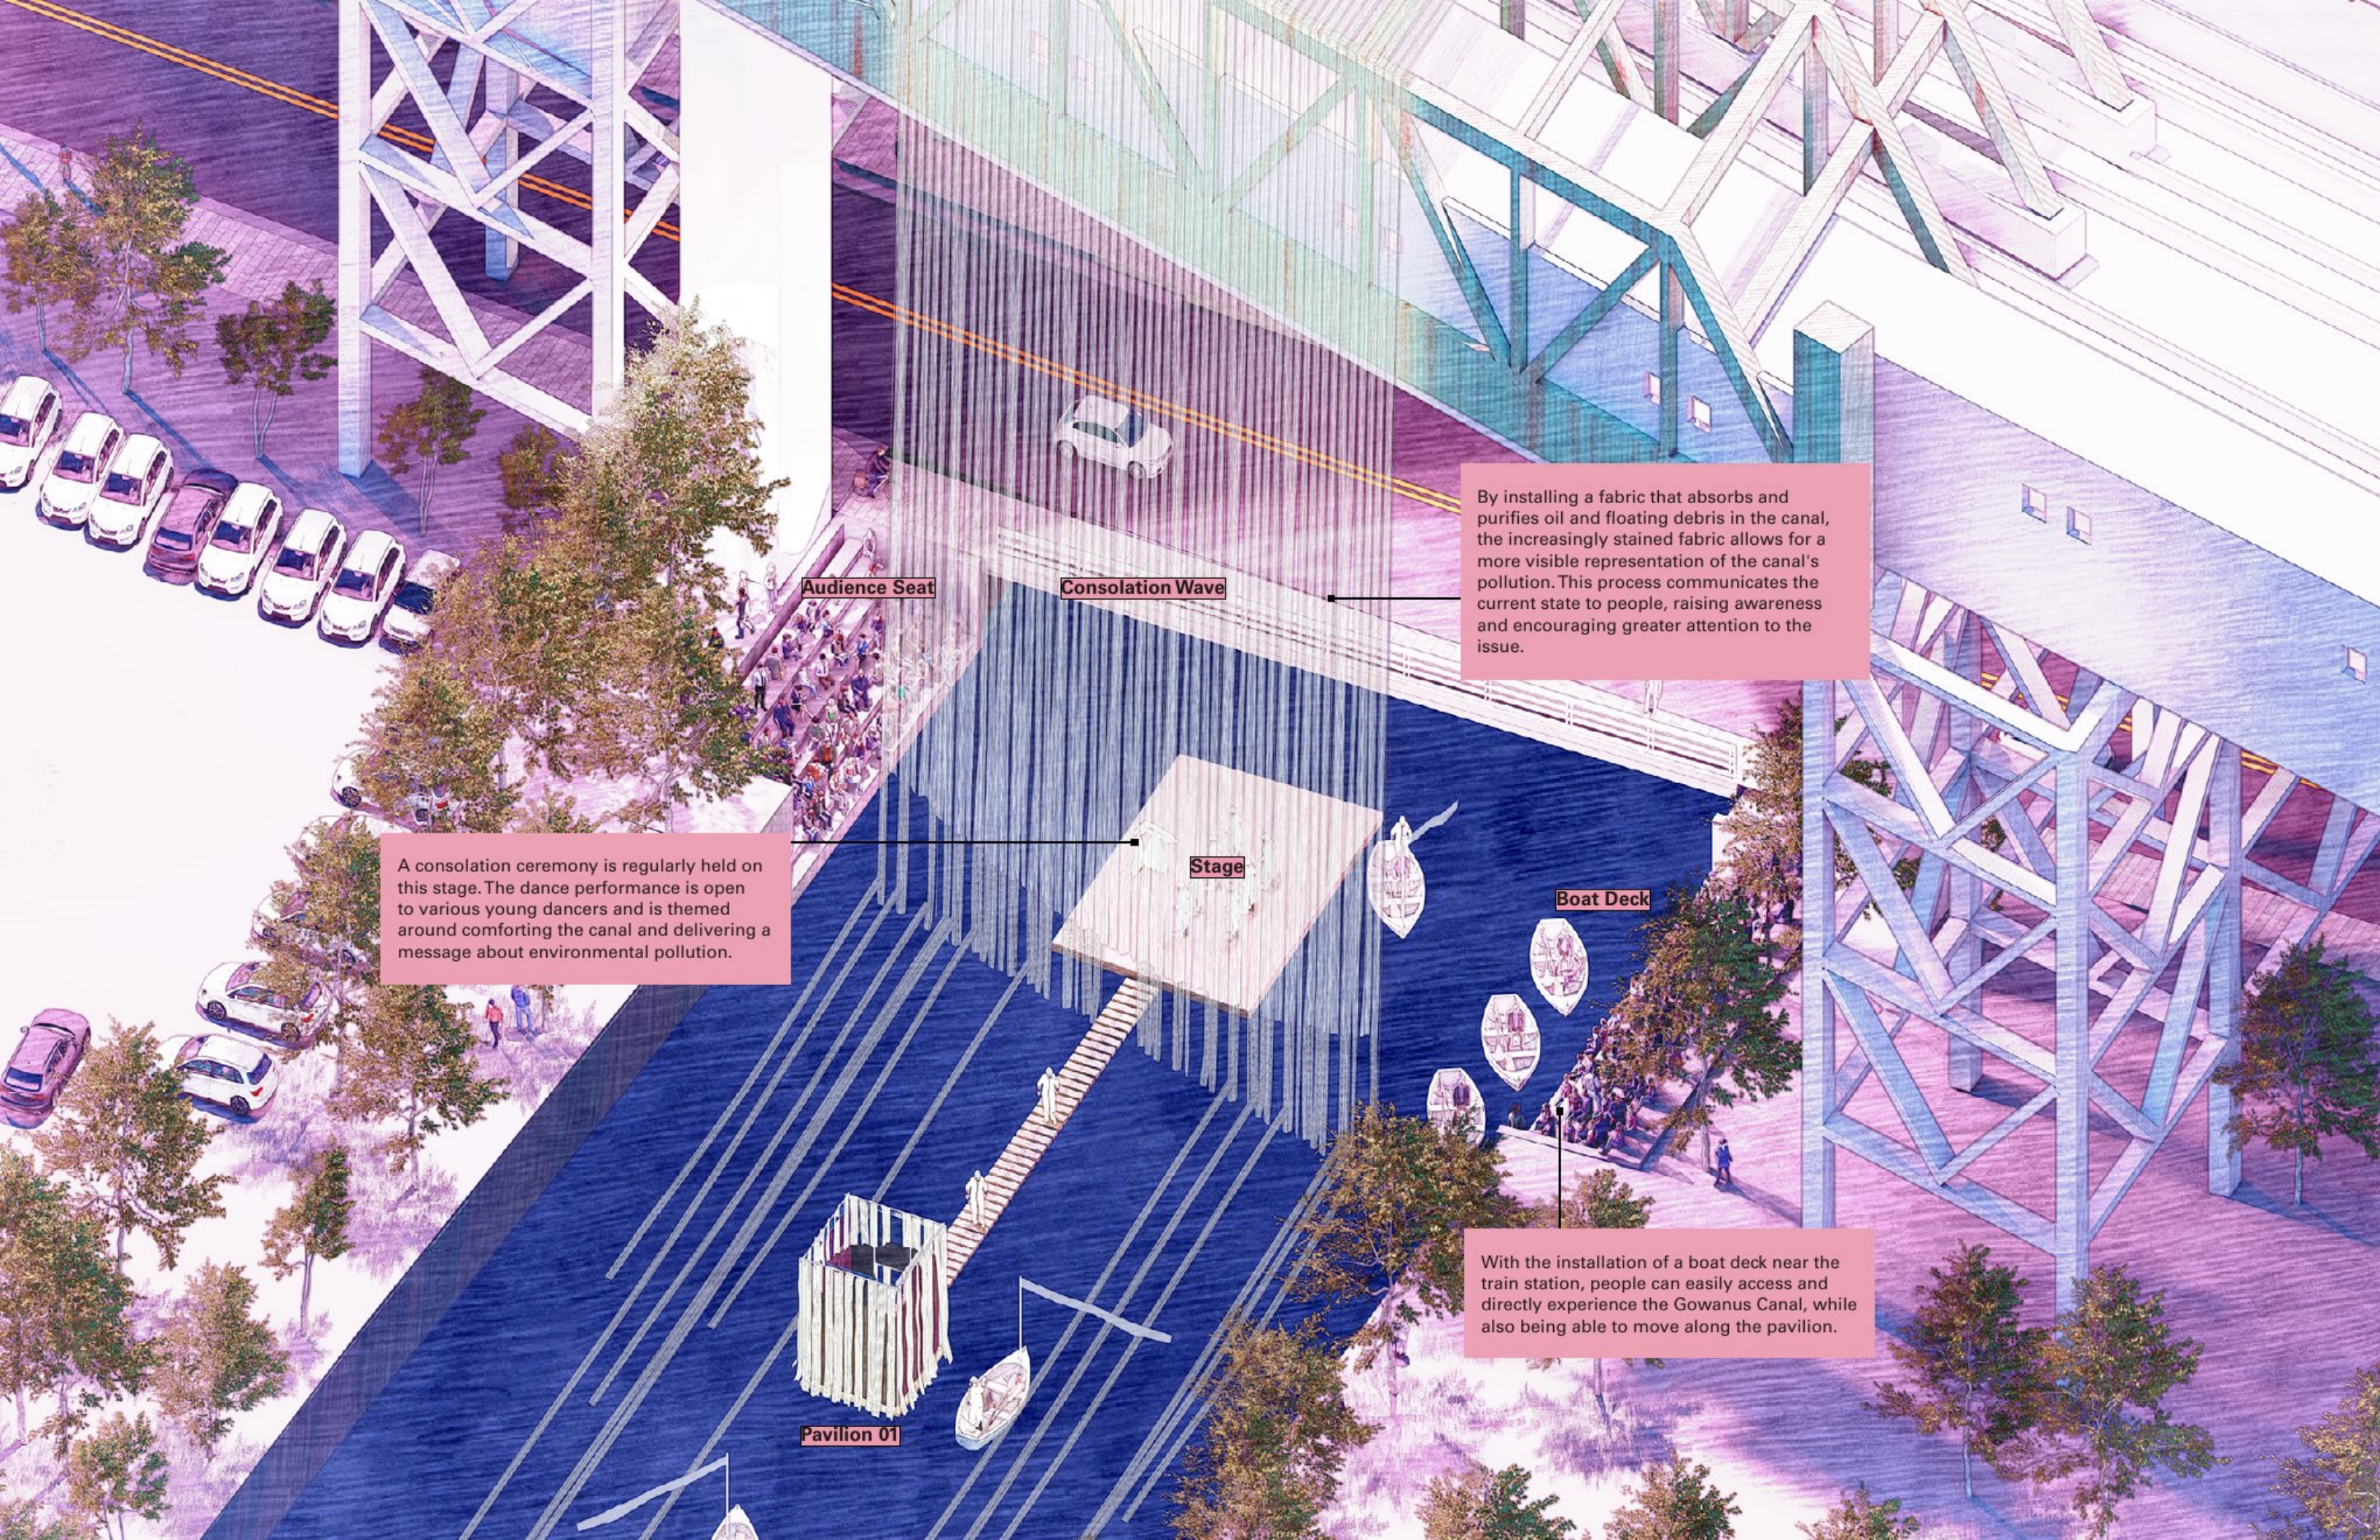

Manhattan View from Station

Black Mayonnaise in the Gowanus Canal

By installing a fabric that absorbs and purifies oil and floating debris in the canal, the increasingly stained fabric allows for a more visible representation of the canal's pollution. This process communicates the current state to people, raising awareness and encouraging greater attention to the issue.

A consolation ceremony is regularly held on this stage. The dance performance is open to various young dancers and is themed around comforting the canal and delivering a message about environmental pollution.

With the installation of a boat deck near the train station, people can easily access and directly experience the Gowanus Canal, while also being able to move along the pavilion.

Consolation Ceremony Sequence

The traditional Korean shamanic ritual, "Wiryungje," is a ceremony designed to comfort souls. Drawing inspiration from "Wiryungje," I propose a project to honor and console the Gowanus Canal's sacrifices. Building on swaying fabric imagery, I suggest the design of the "Consolation Wave" and a performance that embodies these sentiments.

- 01 Turn on the purple lights. Eight people wearing white suits replace the contaminated fabric from Pavilion 01
- 02 They place the contaminated fabric on an extended arm and proceed toward the stage
- 03 they perform a consolation ritual ceremony with swaying clean fabric
- 04 Board the boat and replace the contaminated fabric from the station
- 05 Move to Pavilion and Replace the fabric
- 06 Repeat the process at the last pavilion and Return
- 07 Return and enter the stage together by boat
- 08 Collect the dirty cloths and perform the ritual and dance performance
- 09 Return to Pavilion 01 in order via the bridge
- 10 Turn off the purple lights
